To completely offset our company's carbon emissions, we've donated to onetreeplanted to plant hundreds of native trees in New Zealand. This donation is in addition to the thousands of trees that we will be planting on behalf of our customers.

CHOOSING TO HEAT YOUR HOME WITH A PYRO FIRE WILL REMOVE 10 TONNES OF CO² FROM THE ENVIRONMENT

We've teamed up with OneTreePlanted to plant over twenty native trees for every Pyro, removing ten tonnes of CO² from the environment per fire.

But what does that mean for you?

The amount of CO² your Pyro Fire will emit in its lifetime is completely offset.

Wood is the only carbon sequestered, solar embedded renewable fuel in a human lifetime. This makes it an environmentally considerate way to warm your home. Conserving and replacing our natural resources are the heart of true sustainability, allowing us get to the root of the climate issue.
